Welcome to techtron® we combine passion, drive and intellect with market leading research and cutting-edge technology. We innovate and deliver premium quality products that excite, inspire and challenge the sector.

We are focused on reducing our environmental impact, whilst improving the Health & Wellbeing of our customers.

Future Tech. Today

Research & Development

Here at **techtron®**, we are passionate about what we do. We pride ourselves on our ability to disrupt the market with our innovative products, backed with the very latest technology.

Our drive, and dedication means we evolve with the times, to bring you, our customers exciting products you won't find anywhere else.

We pride ourselves on:

- + **Safety Led Design**
- + **Robust Engineering**
- + **High-Spec Materials**
- + **Continuous Testing**
- + **Product Development**

e-scooters

teckntron®

UK Electric Scooter Guide

Legally, the use of e-scooters is forbidden on UK roads, and pavements – they should only be ridden on private property. However, the Department for Transport are running trials around the UK to explore legalization.

The legalization of e-scooters will help to alleviate the growing pressure on public transport and help us move toward a greener future.

Current regulations:

- + **Private Land Only**
- + **Permission Required**

It is the complete responsibility of the customer to ensure that you operate your e-scooter within all country and local laws. The customer assumes all liability and risk associated with the use of electric scooter products and holds techtron Ltd and its owners free from any liability caused by their use.

E-Scooter Buyer's Guide

Whether you are a first-time rider, or this is simply an upgrade, there are a couple of things you should consider before purchasing your e-scooter.

To help you choose the perfect scooter, we have broken down some of the key considerations for you.

Other considerations:

- + **Safety Features**
- + **Wheel Type**
- + **Brakes**
- + **Hill Climb Ability**

1 Distance / Range

For most daily riders, a scooter with a range of 25 – 30km is perfect. It will allow you to travel an average of 15 miles before you will need to recharge – now that's convenient!

2 Compact / Foldability

If you need a scooter that is practical for daily use, you'll need one that is foldable and easy to carry and store. The size of the scooter when folded will help you determine whether you can carry it in one hand and tuck it away neatly under your desk.

3 Weight

One of the key considerations when it comes to e-scooters is weight. You may need to carry your scooter up stairs or around shopping centers, so you should choose a model that you can carry and maneuver easily.

4 Speed

Typically, the average speed of an e-scooter is 15mph – which trust us, feels an awful lot faster than 15mph in a car! However, if you have a serious need for speed, we have models that go up to 40km/h!

5 Suspension

Suspension on e-scooters works the same as a car, it helps smooth out the bumps for a more comfortable ride. Without suspension, you will get a lot of vibration, which can be uncomfortable on longer journeys.

Core Features

teachtron®

Smart App Technology

Our e-scooters can be connected via Bluetooth to the **techtron®** app. From here, you can lock and unlock your e-scooter and view all your riding statistics, including mileage, speed, and remaining battery life. The app also lets you customise cruise control settings (if applicable).

We regularly update our firmware, so you can enjoy new features to enhance your riding experience.

App specification & features:

- + Lock and Unlock**
- + Check Mileage & Speed**
- + Battery Life Indicator**
- + Cruise Control Function**
- + Firmware Updates**

Bright, Modern Colour Palette

Designed to jump off the shelf, the **techtron**® electric scooters come in a choice of six distinctive colours paired with a matte black body.

This ensures a sleek, modern look that creates consistent brand awareness and sets us apart from our competitors.

Glow in the Dark

To add a touch of magic to the **techtron**® range, all our e-scooters glow in the dark. Not only is this fun, and a great talking point, but it also adds an extra layer of visibility.

Glow in the dark materials carry phosphors that absorb light in the visible and ultraviolet wavelengths and then re-emit visible light, or a 'glow.'

Benefits include:

- + **Extra Layer of Visibility**
- + **Activates when Dark**
- + **Design Led Aesthetic**
- + **Fun for all ages**
- + **Great Talking Point**
